Abstract

Shows a poorly drained wetland that consists of decaying vegetation, retains stagnant water, and is too soft to bear the weight of any heavy body.

Purpose

To show a poorly drained wetland that consists of decaying vegetation, retains stagnant water, and is too soft to bear the weight of any heavy body. Provide accurate high-resolution imagery and mapping datasets to support operations, planning and training.

Statement

MGCP is a coalition of over 30 countries dedicated to producing high-resolution vector data throughout high interest areas of the world. Data is extracted from high resolution imagery in 1° x 1° cells at a scale of 1:50 000. All data produced must meet a minimum horizontal circular error accuracy of 25m and meet MGCP Technical Reference Documentation (TRD) specifications which details extraction guidelines and feature catalogues to ensure consistency. Cell and subregion metadata delivered in XML files based on ISO standards 19115 for geographic content and 19139 for XML implementation will accompany the data. MGCP feature geometry positioned from Orthorectified Very High Resolution Commercial Stereoscopic and

Monoscopic Imagery, AAFIF, DAFIF, DVOF, GPS, Topographic Maps and Geonames.
